# **ORGAN AND EYE DONATION : AN OVERVIEW**

#### **ORGAN AND BODY DONATION :**

## Dr. Shatabdi Sarkar Associate Professor Dept. of Anatomy, AIIMS Kalyani

Organ donation is donating an organ to someone in need of a transplant. Organs like the kidneys, liver, heart, Pancreas, lungs, and intestines can be donated. As for the tissues, one can pledge to donate corneas, skin, heart valves, veins, bones, joints, tendons, and ligaments. It is possible for anyone who has reached the age of 18 to register as a donor of organs or tissues. Medical condition of a registered donor is evaluated at the time of organ transplant. Organ transplant has two sources: living donor and deceased donor. In case of living donor source, donor is already decided for a specific recipient.

For deceased donor source, recipient needs to be selected out of a large recipients' pool. The allocation of organ is a complex process, influenced by several factors including medical urgency and donor & recipient matching. NOTTO (National Organ and Tissue Transplant Organization) functions as apex centre for all India activities of coordination and networking for procurement, distribution of organs and tissues and maintenance of registry of organs and tissues donation and transplantation. Any adult person can register as organ donor through NOTTO website.

Body donation or 'Deh Dan' is a donation of the whole body after natural death for the purpose of medical research and education. The Anatomy department of medical colleges conducting this programme. An adult person may pledge to donate their body to a nearby medical college. Deceased bodies cannot be accepted for body donation or deh dan if they have undergone autopsy or have donated organs (except corneas).
