

## KAMARAJU NATARAJAN

Associate Professor  
Department of Physical Sciences  
Indian Institute of Science Education and Research Kolkata  
PO: BCKV Campus Main Office,  
Mohanpur - 741246,  
Nadia, West Bengal  
Office : 033 6136 0000 - extn. 1307  
Email : nkamaraju@iiserkol.ac.in

### EDUCATION

- 2003-2010**      **Ph.D.**, Department of Physics, Indian Institute of Science (IISc), Bangalore, India.  
Thesis: “Ultrafast response and time resolved spectroscopy of carbon nanotubes, Semiconductors and rare-earth titanates”.  
Thesis Supervisor: Prof. Ajay K. Sood.
- 1998-2000**      **M.Sc (Physics)**, Sri Sathya Sai Institute of Higher Learning,  
Prashanthi Nilayam, Anantapur District, Andhra Pradesh, India.
- 1995-1998**      **B.Sc (Hons) in Physics**, Sri Sathya Sai Institute of Higher Learning,  
Brindavan campus, Whitefield, Karnataka, India.

### PROFESSIONAL EXPERIENCE

**May 2021-** Associate Professor, IISER Kolkata

**Current**

**July 2016-** Assistant Professor, IISER Kolkata

**May 2021**

**Nov 2013** - Postdoctoral Research Associate in Los Alamos National Lab.

**Apr 2016**    Project: Magneto-Optical THz Spectroscopy of two-dimensional electrons and holes.

**Oct 2012** - Postdoc in ECSE Department, Rensselaer Polytechnic Institute, Troy, NY.

**Nov 2013**    Project: Application of plasma wave THz detectors for pulsed THz radiation

**Oct 2010** -    Postdoc in Department of Physical Chemistry, Fritz-Haber-Institut der

**Sep 2012**    Max-Planck-Gesellschaft, Berlin

Project: Transient THz Metamaterials and Coherent Phonons.

**Mar 2002** - Research Assistant in Raman Research Institute, Bangalore, India.

**July 2003**    Project: Laser cooling of Rb atoms.

### Professional Recognition/ Award/ Prize/ Certificate, Fellowship

- **Max-Planck Society Grant** for Postdoctoral Researchers scholarship by Max-Planck Society, Germany (2010-2012).
- **Outstanding reviewer in 2018** for Journal of Nature Light Science Applications (IF 23.4) at Light Conference 2019 (July 16-20) organized by Chinese Academy of Sciences & Light Science & Applications, etc at Changchun, China.)
- **Reviewer Recognition Certificate** (2024-2025): Appl. Phys. A (springernature.com) for best reviews.
- **Trusted Reviewer, IOP journals (From 2025)**

## RESEARCH EXPERIENCE

### Post-doctoral tenure @ LANL, NM

Magneto optical ultrafast THz spectroscopy (THz Quantum Hall effect) @ 1.2K and 0-8T, to explore quantum effects in low dimensional condensed matter systems like two-dimensional electron/hole gas (2DEGs and 2DHGs), nanowires, and topological insulators.

### Post-doctoral tenure @ RPI, Troy, NY

- [1] Application of Plasma-Wave Detectors for Ultra-Short Pulse Terahertz Radiation.
- [2] Design and modelling of different metamaterials and grating structures for various THz applications.

### Post-doctoral tenure @ Max Planck Institute, Berlin

- [1] Creating transient ultrafast THz plasmonic nanostructures and study how they dynamically manipulate the incoming THz radiation. These THz plasmonic nanostructures rely on a transient spatial modulation of the refractive index of a semiconductor. One example is a wire-grid polarizer that consists of parallel metallic stripes (exhibiting high carrier density) with dielectric stripes in-between. I have demonstrated this dynamic polarizer action on Si and this has appeared in **Nature: Light Science and applications (IF 23.4 - see publications)**.
- [2] Investigation of femtosecond laser induced tellurium enrichment in ZnTe by coherent phonon spectroscopy (published in Applied Physics Letters).

### PhD tenure

- [1] Investigation of third order nonlinearity and ultrafast carrier dynamics in single and double-walled carbon nanotubes (SWNT and DWNT); Our results indicate that DWNTs are better suited as ultrafast optical switches compared to SWNTs.
- [2] Direct demonstration of electron-phonon coupling: Chirping coherent phonons in narrow-band gap (Te and Bi<sub>2</sub>Te<sub>3</sub>).
- [3] Coherent phonons in large band gap semiconductor, ZnTe and spin frustrated titanates (Dy<sub>2</sub>Ti<sub>2</sub>O<sub>7</sub>, Gd<sub>2</sub> Ti<sub>2</sub>O<sub>7</sub>, Tb<sub>2</sub> Ti<sub>2</sub>O<sub>7</sub>): phase transition at 100K revealed by a change in the initial phase and line width of one of the coherent phonons in Dy<sub>2</sub>Ti<sub>2</sub>O<sub>7</sub>.
- [4] Time domain THz transmission experiments on free standing film of DWNTs, poly vinyl composite of SWNTs and silver nanoparticles; we observed low frequency vibrations in DWNT and SWNT, and confined acoustic modes in silver nanoparticles.

## EXPERTISE

### Experimental:

- [1] Designed and built z-scan, low temperature degenerate pump-probe, Time domain THz setup (TDS-THz), Optical pump THz probe (OTPP), and THz pump-THz probe setups, Intense THz generation using difference frequency Mixing, and Magneto Optical Kerr (using Oxford 8T spilt coil superconducting magnet-cryostat) and Faraday rotation setups for THz and Optical region-TDS THz and OTPP setups.
- [2] Hands on experience in aligning the femtosecond oscillator (< 10fs and < 30fs), amplifier (Spectra Physics and Coherent Inc.) and Optical parametric amplifier systems (Spectra Physics and Topaz Inc.) (Underwent training for 15 days in Spectra Physics Inc.)
- [3] Actively involved in setting up Centre for Ultrafast spectroscopy (CULA), India in my PhD tenure. I also setup the ultrafast THz lab using 15 mJ amplifier (Coherent Legend system) and Topaz in Germany. In LANL, I built the TDS and OTPP setup in to investigate the materials in quantizing magnetic fields (0-8T).
- [4] Raman Spectroscopy, ultra high vacuum systems and laser cooling set-ups.

### Computational:

- [1] ORIGIN, MATLAB, MATHEMATICA and LABVIEW.
- [2] Open phonon/Shell model-based lattice dynamic calculations.
- [3] COMSOL, Lumerical FDTD, DEVICE and MODE Solutions

## RESEARCH INTERESTS:

Ultrafast dynamics and emergent phenomena in quantum and low-dimensional materials, with emphasis on nonequilibrium interactions among spins, excitons, phonons, and other collective modes. Development and application of advanced spectroscopic techniques—including femtosecond pump–probe, terahertz, nonlinear optical methods, and stimulated Raman spectroscopy—to probe light–matter interactions, coherent dynamics, and coupling between electronic, spin, and lattice degrees of freedom. Particular emphasis is placed on strongly correlated systems, superconductors, and low-dimensional materials, with nonlinear responses under intense THz fields offering routes toward novel devices, metamaterials, and energy-harvesting platforms.
